WORKSHEET 5 SQL

1. Write SQL query to show all the data in the Movie table.

   SELECT * FROM movie

2. Write SQL query to show the title of the longest runtime movie.

   SELECT `title` FROM movie
   ORDER BY `runtime` DESC
   LIMIT 1;

3. Write SQL query to show the highest revenue generating movie title.

   SELECT title, revenue FROM movie

   ORDER BY revenue DESC

   LIMIT 1;

4. Write SQL query to show the movie title with maximum value of revenue/budget.

   SELECT title, (revenue-budget) AS Profit FROM movie

   WHERE movie_status ='Released'

   ORDER BY Profit DESC

   LIMIT 1;

5. Write a SQL query to show the movie title and its cast details like name of the person, gender, character name, cast order.

   SELECT `title`, `person_name`, `gender`, `character_name`, `cast_order`
   FROM movie AS m INNER JOIN movie_cast AS c
   ON m.`movie_id` = c.`movie_id`
   INNER JOIN gender AS g
   ON c.`gender_id` = g.`gender_id`
   INNER JOIN person AS p
   ON c.`person_id` = p.`person_id`;

6. Write a SQL query to show the country name where maximum number of movies has been produced, along with the number of movies produced.

```
SELECT `country_name`, COUNT(`movie_id`) AS no_of_movies

FROM production_country AS a INNER JOIN country AS b

ON a.`country_id` = b.`country_id`

GROUP BY `country_name`

ORDER BY no_of_movies DESC

LIMIT 1;
```

7. Write a SQL query to show all the genre_id in one column and genre_name in second column.

```
SELECT genre_id , genre_name FROM genre;
```

8. Write a SQL query to show name of all the languages in one column and number of movies in that particular column in another column.

```
SELECT language_name , COUNT(movie_id)  AS no_of_movies

FROM movie_language AS a

INNER JOIN language AS l

ON a. language_id  = l.langauge_id

GROUP BY language_name;
```

9. Write a SQL query to show movie name in first column, no. of crew members in second column and number of cast members in third column.

10. Write a SQL query to list top 10 movies title according to popularity column in decreasing order.

```
SELECT title, popularity FROM `movie`

ORDER BY popularity DESC

LIMIT 10;
```

11. Write a SQL query to show the name of the 3rd most revenue generating movie and its revenue.

```
SELECT title, revenue FROM movie
ORDER BY revenue DESC
LIMIT 1 OFFSET 2;
```

12. Write a SQL query to show the names of all the movies which have “rumoured” movie status.

```
SELECT title, movie_status FROM `movie`

  WHERE movie_status = 'rumoured';
```

13. Write a SQL query to show the name of the “United States of America” produced movie which generated maximum revenue.

14. Write a SQL query to print the movie_id in one column and name of the production company in the second column for all the movies.

```
SELECT   movie_id   ,  company_id
FROM movie_company AS m INNER JOIN production_company AS p
ON m.company_id = p.company_id;
```

15. Write a SQL query to show the title of top 20 movies arranged in decreasing order of their budget.

```
SELECT title, budget FROM `movie`

 ORDER BY budget DESC

  LIMIT 20;
```
