WORKSHEET 3 SQL

1. Write SQL query to create table Customers.

CREATE TABLE Customers (
customerNumber INT PRIMARY KEY ,customerName TEXT, contactLastName TEXT, contactFirstName TEXT, phone INT, addressLine1 TEXT, addressLine2 TEXT, city TEXT, state TEXT, postalCode INT, country TEXT, salesRepEmployeeNumber INT , creditLimit INT
)

2. Write SQL query to create table Orders.

CREATE TABLE Orders (
orderNumber INT PRIMARY KEY , orderDate DATE, requiredDate DATE , shippedDate DATE, status TEXT, comments TEXT, FOREIGN KEY (customerNumber) refrences Customers (customerNumber)

)

3. Write SQL query to show all the columns data from the Orders Table

SELECT * FROM Orders

4. Write SQL query to show all the comments from the Orders Table.

```
SELECT comments FROM Order;
```

5. Write a SQL query to show orderDate and Total number of orders placed on that date, from Orders table.

```
SELECT orderDate ,  COUNT(orderDate)
 FROM orders
 GROUP BY orderDate
```

6. Write a SQL query to show employeeNumber, lastName, firstName of all the employees from employees table.

```
SELECT employeeNumber, lastName, firstName  FROM  employees
```

7. Write a SQL query to show all orderNumber, customerName of the person who placed the respective order.

```
SELECT Orders. orderNumber, Customers. customerName
FROM Orders, Customers
        WHERE Orders.customerNumber = Customers.customerNumber;
```

8. Write a SQL query to show name of all the customers in one column and saleRepEmployee name in another column.

SELECT customerName , salesRepEmployeeNumber FROM Order;

9. Write a SQL query to show Date in one column and total payment amount of the payments made on that date from the payments table.

SELECT paymentDate , SUM(amount) FROM payments;

10. Write a SQL query to show all the products productName, MSRP, productDescription from the products table.

SELECT productName, productDescription

FROM orders

WHERE quantity = (SELECT MAX(quantity) FROM orders)

11. Write a SQL query to print the productName, productDescription of the most ordered product.

SELECT productName, productDescription FROM orders

WHERE quantity = (SELECT MAX(quantity) FROM orders)

12. Write a SQL query to print the city name where maximum number of orders were placed.

SELECT city FROM orders

WHERE quantity = (SELECT MAX(quantity) FROM orders WHERE city IS NOT NULL

13. Write a SQL query to get the name of the state having maximum number of customers.

SELECT state, COUNT(*) AS customer_count FROM customers

GROUP BY state ORDER BY customer_count DESC LIMIT 1

14. Write a SQL query to print the employee number in one column and Full name of the employee in the second column for all the employees.

SELECT employeeNumber, firstName '' lastName AS fullName

FROM employees

15. Write a SQL query to print the orderNumber, customer Name and total amount paid by the customer for that order (quantityOrdered × priceEach).

SELECT o.orderNumber, c.firstName '' c.lastName AS customerName, o.quantityOrdered * o.priceEach AS totalAmount

FROM orders o

JOIN customers c ON o.customerNumber = c.customerNumber
